What did you like about the talk(s) you selected?
61 answers

The talks were well-balanced in terms of the depth of prior knowledge required and their practical applicability.	Nov 4, 09:47 AM
What I particularly liked at FIPS 'n' Chips was that all speakers and panelists demonstrated a high level of expertise. (This does not only apply to the two selected events). Another important aspect was the selection of the topics.	Nov 4, 09:46 AM
I liked the content of the presentations	Nov 4, 08:48 AM
Very rich educational information	Nov 3, 12:07 PM
The view and incite of the presenters and panelist.	Nov 2, 04:59 PM
The AI panel had very diverse opinions. This is how it should be. This is a very complicated problem and constructive discourse is necessary to ensure we are doing the right things. The entropy discussion was fantastic because it had professionals from all states of development. We must encourage younger professionals in cybersecurity to ensure that this is a focus going forward.	Nov 3, 11:00 AM
SSP training was very accessible, the only talk I understood	Nov 1, 09:23 PM
New capability that provides a central repository of information central to the cryptography landscape	Nov 1, 10:4[illegible]

On Non-Human Auth: This point has been something that is peripheral to concerns I've had about what it means to be an operator of a module. It was interesting overall to see it from this perspective. Rolling the Dice: The sheer idea of using the basic pedagogical example for randomness as an element within a noise source is hilarious, and Tim's 2-layer modeling is clever in that it dealt with two problems simultaneously, so that talk was worth it for me.	Oct 30, 05:58 PM

Do you have any additional feedback you'd like to provide?
16 answers

A more detailed talk on the use of AI for breaking and strengthening cryptographic implementations can be added in the future.	Nov 4, 09:47 AM
Projector in Google sailtower was crooked	Nov 1, 09:23 PM
European version that is not FIPS centric?	Nov 1, 05:36 AM
I didn't like that the 2nd day venues were far apart and different from first day; they also changed without notice from when I booked my ticket + travel. I might be more of a minority, but I would have wanted some content aimed at beginners regarding using validated crypto modules, vs actually validating them.	Oct 30, 08:59 AM
no	Oct 29, 06:04 PM
Keep the conference technical, support networking and prevent it becoming a PR show.	Oct 29, 03:26 PM
Although the title is focused on FIPS, I would like to see other certification approaches considered, especially SESIP and CRA Class 2 as they impact a wide range of products.	Oct 29, 01:59 PM
The Entropy panel was one I was most excited for going into the conference, but I found it was hard to follow at certain points. Some of the speakers were difficult to hear, and as someone newer to this field, hearing each panelist explain the concepts in their own way sometimes muddied the waters, so I didn't come away with a clear understanding on certain aspects. The panel did make me want to dive deeper, and there were concepts discussed that did land; however, a quick recap from the moderator after each round of answers may help attendees to hold onto key points while still keeping the discussion that makes a panel valuable.	Oct 29, 01:03 PM

well organized, with insightful sessions, knowledgeable speakers, and excellent networking opportunities. The FIPS n Chips book was especially wonderful to receive and will be a great resource to keep and refer to. Being recognized for my CVP certification was another special moment for me. I truly appreciate this recognition and the efforts of the organizers in celebrating the community's achievements. Thank you for putting together such a meaningful and memorable event. I look forward to being part of future conferences! | Oct 28, 12:29 PM

The connectivity in the Visualization Lab to the stream from Avaya Auditorium was surprisingly problematic. | Oct 28, 10:17 AM

What one change would most improve the location, facilities, food, or communications?
41 answers

Coffee breaks for 10 minutes are too short. | Nov 4, 09:46 AM

The first day was fully packed. I would like to see more opportunities/time for networking.
I've never got any info about a dinner on day2
The food quality ans selection was better on day 2
There wasn't any water available on day 1 in the afternoon (4pm).
Would be great to have one location for all conference days in the future
Would be great to have the next conference not close to a formula one race (cheaper hotel rates) | Nov 4, 08:48 AM

The locations were fantastic. I actually appreciated that all sessions weren't in the hotel. Forced me outside and allowed me to take in UT, which is a stunning campus. I wish more conferences had this distributed approach. | Nov 3, 11:00 AM

Easier parking. Longer networking breaks. | Nov 1, 10:44 AM

Receiving a visitor list beforehand | Nov 1, 05:36 AM

I believe any kinks (like venue sizing) is simply a result of the conference growing so quickly; I don't think I can provide any useful feedback here. | Oct 30, 05:58 PM

The breaks were extremely short, to the point where the room was empty while starting the talk directly after a break. This ended up causing talks to run short on time, pushing things back more, causing shorter breaks later in the day. | Oct 30, 12:00 PM

Maybe one more break in the morning. at least one slightly longer panel. I understand there were many topics to cover in 2 days. | Oct 30, 12:0

other interesting event is good and the schecule consideratin, such as avoid F1 day can be better. And food is basically good but can be improved if egg-free food is also provided.	Oct 30, 01:28 AM
It would be great if the event was all held in one location.	Oct 29, 08:42 PM

Which session on the first day was most valuable to you, and why?
26 answers

PANEL — When AI Meets Cybersecurity	Nov 4, 09:46 AM
Crypto V introduction, PQC panel and AI panel.	Nov 1, 10:44 AM
	Oct 30, 05:58 PM
AI panel. The panelists presented their thoughtful opinions, more interactive.	Oct 30, 08:43 AM
PANEL — CMVP Mission: FIPS for Trusted Cryptography. Since I am a tester of CMVP, the direction is very important.	Oct 30, 01:28 AM
The entropy panel session was most valuable because we were able to discuss many topics and hear from several perspectives including many questions coming from the audience. I thought it was also the most interactive session.	Oct 29, 08:42 PM
PANEL — When AI Meets Cybersecurity - Interesting topic, great panel.	Oct 29, 08:16 PM
"When AI Meets Cybersecurity" I appreciated the expert opinion and perspective.	Oct 29, 07:44 PM
The most valuable to apply in the day to day module validation was "The Post-Quantum Signature Gap". The AI panel , especially Apostol's point of view was sensible at the time of the Microsoft 27% workforce buyout. The one man show by S Mulready was a the most surprising.	Oct 29, 06:50 PM
The most valuable session for me was (The PQC Countdown: Preparing for the Post-Quantum Era). I liked the discussion on the urgency of transitioning to quantum resistant cryptography and the strategic implications for government, industry, and critical infrastructure. As someone directly involved in cryptographic engineering, standards, and security assurance, I found the panel especially relevant.	Oct 29, 01:55 PM

Which Deep Dive session was most valuable to you, and why?

21 answers

Rachael Parker's indication on the impact of flicker noise on the metastable latch is quite good to know; I've spent the past year on flicker noise modeling for ROs and hadn't yet thought of 1/f with respect to the metastable latch. I'd add that the Rolling the Dice talk was extremely interesting, however, Tim's technical explanation gave me a few different ways to look at other problems I'm addressing separately.	Oct 30, 05:58 PM
Cryptographically agile HSM: It covered important strategies with details. Well organized talk. Easy to follow and understand. PQC Validation: The details of making PQC testable are very important and interesting. PCI-HSM: It reflected the challenges to make PCI-HSM FIPS 140 compliance in great details. The talk demonstrated how difficult it can be to follow the pace of cryptography progress.	Oct 30, 08:43 AM
Rolling The Dice: Entropy Source Validation (Jake Maynard; Doug Hill; Tim Hall; Volodymyr Zabolotnyi). This session is very informative to test Entropy as a tester in CSTL.	Oct 30, 01:28 AM
Trust Without Boundaries by (Marc Ireland) was most valuable to me. In it he expanded on why it is a good idea to try to make component validations re-usable. The best example he had was the recent draft I.G. D.U. where we will have to carry a caveat on the 90B noise source if it is not included inside the FIPS module boundary because it hasn't been tested for 140-3 conformance (i.e. proper zeroization of SSPs, etc..). This resonates with me because 90B is a FIPS 140-3 document. Stating that you are about to certify a sub-component of the FIPS 140-3 standard with a 90B validation, and then in the same sentence saying that the component is not evaluated against the 140-3 standard and modules that consume will have to wear this perceived stain on them seems crazy to me. I think he is right on! -Jake	Oct 29, 08:42 PM
PQC: The Race from Standardization to Silicon (Ed Morris) - Great Summary of current deadlines across programs.	Oct 29, 08:16 PM
"Adopting ISO/IEC 19790:2025 in FIPS 140-3 " I believe this was the most strategic proposal that was made regarding the upcoming transition.	Oct 29, 07:44 PM
I appreciated the focus on the current state of PQC and its relevance to the rapidly evolving security landscape.	Oct 29, 01:55 PM
Next Generation Metastability Based Digital Noise Sources was particularly interesting for me given the content and the quality of the presenter and their presentation (I thought the PCI-HSM application was very well done	Oct 29, 12:37 AM

Desiging HSMs: Excellent description of the technology; presentation was easy to follow (great use of breadcrumb graphics for progress); clear communication; followed the title and abstract to cover the topic well.	Oct 28, 07:59 PM
PQC: The Race from Standardization to Silicon (Ed Morris)	Oct 28, 03:40 PM

Which beginner topic needs more hands-on exercises or explanation?
3 answers

	Oct 29, 06:50 PM
It could be interesting to see a lab's perspective on taking a "dummy" implementation through levels 1-4 in real time. Details of the submission that might cause rounds of feedback, simulating a change to the IG that impacts the IUT, etc.	Oct 29, 09:45 AM
Maybe ACVTmate introduction could be more hands-on based, not super necessary	Oct 28, 09:32 AM

Which three presentations or panels were your favorites?
27 answers

Keynote Address ISO/IEC 19790:2025 Adoption PQC Validation: From Standards to Testing	Nov 4, 08:48 AM

The PQC Countdown CMVP Mission Where Randomness Begins	Oct 29, 03:41 PM

Which session or panel should we bring back or expand next year?
25 answers

When AI meets cybersecurity All sessions directly from NIST	Nov 4, 08:48 AM
Continue to have panels with participants from various disciplines. The civil discourse in these panels is what we need to truly understand the issues and work to be done.	Nov 3, 11:00 AM
PQC and AI	Nov 1, 10:44 AM
Randomness (this time, put a physical designer on the panel too! Rachael Parker was there, David "DJ" Johnston would probably be willing to come if given enough notice). Since you're at UT Austin, there might even be an academic there who is somewhat interested in the field.	Oct 30, 05:58 PM
The real example to test CMVP module with difficult point to test.	Oct 30, 01:28 AM
AI in Cyber, CMVP Mission, and then mix it up with new relevant panels.	Oct 29, 08:42 PM
AI related topics Networking opportunities	Oct 29, 06:34 PM
The NIST ones. I think it's phenomenal to know how that group thinks	Oct 29, 03:41 PM
N/A	Oct 29, 01:55 PM
Entropy and AI impact discussions	Oct 29, 09:45 AM

What new topics, speakers, organizations, or hands-on activities would you like next year?
25 answers

Provide a more global context. How are standards being implemented in other countries impacting product development and validations being done here in North America.	Nov 3, 11:00 AM
I'd like to hear/see other 19790-based certification schemes. While it isn't FIPS per se, it is only a short hop to those worlds.	Oct 30, 05:58 PM
prefer the same amount or fewer sessions. more time for QA	Oct 30, 12:09 PM
I think current balance of topics, speakers, organazation is good.	Oct 30, 01:28 AM
I'd like to see more about formal verification, entropy discussions should continue, and so should sub-component certification re-use. This should be a high priority within the industry to help make it more efficient to get complex modules with already certified subcomponents validated more quickly.	Oct 29, 08:42 PM
Securing AI use cases Collaboration between academia, industry, certification bodies and labs	Oct 29, 06:34 PM
PQC. It would be nice to be able to hear from the banks or organizations who are going through migration	Oct 29, 03:41 PM
FIPS N CHIPS has the opportunity to distinguish itself as the conference where cryptographic policy meets engineering and operational reality. The government perspective is essential, but standards and policy announcements alone do not establish readiness. Industry must demonstrate implementation, academia must contribute actual empirical research, and all stakeholders must openly examine the constraints that prevent successful deployment. A more interactive, technically rigorous format would be good, major scope of improvement would be allocationg more time for qa, reserving only a few minutes for questions when numerous participants are actively seeking engagement undermines one of the conference's greatest strengths.	Oct 29, 01:55 PM
For folks coming into the industry, I think it could be useful to have a hands-on ACVTS testing session using Cisco's libacvp or Stephan Mueller's acvpproxy/acvpparser. Start from scratch with creating the necessary demo server credentials, interpreting the ACVP specification into a capabilities JSON, fetching demo vectors, comparing with expected values, and validating responses.	Oct 29, 09:45 AM

What should we keep exactly as it is?

mix of attendees (NIST, atsec, vendors, students, ...)	Nov 4, 08:48 AM
Keep the two day format and the networking dinner. Time to connect is so important.	Nov 3, 11:00 AM
Keep in Austin	Nov 1, 10:44 AM
I liked the mix of academia into things, it was a nice change of pace.	Oct 30, 05:58 PM
The contents are very good in balance, such as standard related interpretaion such as FIPS and ISO. The important view point for their standard and technical perspective should be kept.	Oct 30, 01:28 AM
Panels and Tech Talks, while adding a workshop type of day that is focused on FIPS submissions.	Oct 29, 08:42 PM
Keep product sales pitches out.	Oct 29, 07:44 PM
The combo panel and talks and training session	Oct 29, 06:50 PM
Everything, just do more of some (see input)	Oct 29, 06:34 PM
Loved that the talks didn't go over 30 minutes unless it was a panel	Oct 29, 03:41 PM

What is the single most important thing we should improve next time?
30 answers

a bit more time for networking	Nov 4, 08:48 AM
Provide times for questions. There was lots of great content, but the time for questions was often cut short. Questions allow everyone to join in the conversation and understand perspectives across the community.	Nov 3, 11:00 AM
Keep in location to make cost affordable.	Nov 1, 10:44 AM
More breaks! A lot of people wish to talk to each other, there wasn't enough time to mingle.	Oct 30, 05:58 PM
More Q&A time	Oct 30, 12:09 PM
Longer networking breaks.	Oct 30, 12:00 PM
This event schedule is very good but if you improve the networking, the coffee break time can be longer	Oct 30, 01:28 AM

No fall back.	Oct 29, 06:50 PM
Time dedicated to networking opportunities	Oct 29, 06:34 PM

Any other comments or suggestions?

The first day was fully packed. I would like to see more opportunities/time for networking. Would be great to have one location for all conference days in the future Would be great to have the next conference not close to a formula one race (cheaper hotel rates)	Nov 4, 08:48 AM
I enjoyed this event very much. Only my request is the timing, if you can avoid F1. The transportation and hotel demad in this time was very heavy.	Oct 30, 01:28 AM
Thanks for a great time and a highly valuable experience learning from the industries most influential members.	Oct 29, 08:42 PM
Great event, will certainly be back.	Oct 29, 03:41 PM
The amazing caliber of credentialed professionals made this an invaluable experience. I was a little disappointed by several of the speakers and panels not addressing the topics as described in their abstracts. The Random Presentation was terrifically entertaining and well positioned on the agenda. The dinner was a nice way to enjoy the cuisine this location is known for. Andreas was an amazing MC to kick off Day 1. Looking forward to the next conference.	Oct 28, 07:59 PM
No.	Oct 28, 03:40 PM
Suggestion to consider: Having a Conference 'Flow' that follows the 'phases' of Crypto validations from inception to certificate issuance. Align the talks/panels in order of that workflow and help the overall audience then better understand, in addition to the technical side, how the process actually works and flows from start to finish. it can highlight where things are great and where there might be more work needed.	Oct 28, 02:24 PM
Conference overall was very good. As the day went on, I got the sense of people wanting to chat or a take a longer break between sessions--seems pretty natural as the audience gets tired. On the flip side, I appreciated everything staying on time. Very well organized.	Oct 28, 11:30 AM

Make Austin this conf "home"! Bring Tesla, Dell, Microsoft & Cisco to participate more; atsec &
Another lab can give more hands on learning on how to get FIPS certified;

Oct 27, 09:43 PM
